# Agricultural Trailer Test Unit

## Advanced Agricultural Trailer Test Unit

EU 2015/68 Compliant Testing for Agricultural Trailers (Category R & S)

**EU 2015/68 Dual-Line Hydraulic Simulation:** Designed to act as a tractor to test agricultural trailers (Category R) and interchangeable towed equipment (Category S) equipped with dual-line hydraulic braking systems.

**High-Performance Hydraulic Power Unit:** Mobile and robust hydraulic unit capable of providing the necessary pressure and flow rates required for heavy-duty trailer testing.

**Integrated Control & Measurement Case:** Portable industrial control case featuring high-precision pressure transducers and high-speed data acquisition hardware for on-site testing.

**Annex III Response Time Testing:** Precisely measures the response time of the trailer's braking system, ensuring the time elapsed between the tractor's command and the trailer's brake activation meets safety limits.
